+573236560330 | brandondavidgonzalez28@gmail.com | Bogota - Colombia

Backend Developer with strong expertise in Java, specializing in Spring Boot for building scalable and high-performance applications. Experienced in developing RESTful and SOAP APIs, and applying architectural patterns such as Clean Architecture, Onion Architecture, and Microservices. Proficient in relational databases including SQL Server and MySQL, as well as NoSQL databases like MongoDB. Skilled in Docker for containerization and deployment. Comfortable working in command-line environments on both Windows and Linux, with hands-on experience using Git and GitHub. Also familiar with React.js and JavaScript, and capable of contributing to full-stack projects using Laravel and PHP. A reliable team player in agile and cross-functional environments.

EXPERIENCE

Quality Assurance & DevOps Specialist | ChevyPlan
Jul 2024 - Present

I work as a Quality Assurance & DevOps Specialist, directly responsible for software testing, database administration, and infrastructure maintenance. I designed and executed unit tests and QA processes to ensure system reliability and performance. I managed and optimized database operations using SQL Server and IBM Db2, and provided hands-on infrastructure support with Cisco technologies, Docker containers, and Microsoft Azure cloud services. I also collaborated closely with development and IT teams to maintain stable environments and implement continuous integration workflows.

Backend Developer | NexLogix
Oct 2023 - Present

I founded NexLogix as both my graduation project and entrepreneurial initiative. I designed and implemented a microservices architecture using Laravel for backend services and RESTful APIs, and developed a SOAP-based electronic invoicing service in Java using Spring Boot with Spring Web Services, integrated with Colombia's DIAN. I also created NexLogix as an cross-platform mobile app using React Native. I managed the entire system lifecycle—from architecture and development to deployment—ensuring scalability, security, and compliance with national regulations.

Debt Collector | Radius Global Solutions
Mar 2023 - Mar 2024

As a debt collector, my role entailed receiving cold calls from customers with outstanding balances that had exceeded the payment due date without any received payments. I offered alternative payment methods and provided solutions. Due to the sensitive nature of the information, I had to meticulously review numerous documents, contracts, and clauses. Additionally, I was responsible for explaining terms and conditions and documenting reports in the database. I consistently ensured completion of my work using Excel and SQL databases such as SQLite, maintaining meticulous records and staying up-to-date with all tasks.

HIGHER EDUCATION
2023 - 2025

SENA

Associate Degree in Software Analysis and Development

(National Learning Service) – Colombia

- English C1
